

Introducing the Cavelo Platform

Simplified Data Protection and Attack Surface Management

Consolidate costly spend and multiple security technologies with Cyber Asset Attack Surface Management (CAASM) from Cavelo

As your business adds new digital assets (hardware and software), your overall attack surface grows, increasing cyber risk and the chance of a data leak or security breach. Data is your business's most critical asset. Getting visibility to the digital assets and sensitive data that's used, stored and shared across the tools and technologies you use is mission critical when it comes to aligning to security best practices, achieving compliance and keeping your data safe from risks.

Powered by machine learning, the Cavelo platform continuously scans your company's cloud applications, cloud hosted servers and on-premises servers and desktops to identify, classify, track, protect and report on sensitive data.

Cavelo is an on-premises and cloud compatible platform

It's designed to easily help you and your team align to industry best practices and understand where sensitive data lives in your business, how it's protected, where it's been used and who has access to it – all through a single pane of glass.

Get full visibility across your tech stack with a customizable dashboard and five key capabilities pillars that match your unique business requirements and regulatory frameworks.

Data Protection

Map your sensitive data and unique vulnerabilities to best practice benchmarks like the NIST cybersecurity framework and Center for Internet Security CIS benchmarks.

Data Tracking

Track your data wherever it lives on your network and set up real-time alerts that flag and track data in motion – giving you time to act before data compromise.

Inventory & Asset Discovery

Uncover sensitive data and get a handle on data sprawl with always-on data discovery and classification that auto-classifies all data files, including picture/video files.

Data Governance Reporting

Achieve compliance with reporting capabilities that align to global standards, and rule-based alerts to detect and track data movement across the network.

Risk Management

Leverage risk benchmarking that prioritizes remediation tasks and applies data and vulnerability findings to pinpoint your real-time breach risks and costs.

The Cavelo platform offers pricing that's easy on your budget, and right-sized for your business

Depending on the type of business you are and the industry you operate in your data protection and compliance requirements will vary. That's why the Cavelo platform is offered as a right-sized platform that can meet your needs today and scale with your business, regardless of how many assets, data sources, cloud applications and endpoints connect to the network. Our pricing model is simple and starts based on the number of data sources and employees your business has.

TRY BEFORE YOU BUY

There's nothing worse than purchasing a new product and realizing that it doesn't actually meet the needs of your team or organization. Security technology is a major investment, and before you invest your team's time and budget you need confidence in your decision.

That's why Cavelo offers a no-strings-attached 30-day full product trial, so you and your team can experience everything the Cavelo platform has to offer and vet whether its capabilities match your business's use cases.

Visit www.cavelo.com to begin your free trial.

Seeing is believing. Within hours the trial will deliver:

ROI

Get valuable data that you can take to your leadership or decision makers.

Competitive Review

We're not shy! Compare us to the software or tools you're using today.

Immediate Value

Let your team members test it too to make sure Cavelo is right for you!

Real Reports

Run reports (even in trial) that you can review and share with your team.

Use Case Vetting

Test the product against all of the use cases your team handles.

Full Functionality

Access full platform functionality and our team of experts who can help you along the way.

CAVELO

Cavelo helps businesses achieve attack surface management with automated data discovery, classification and reporting. Its cloud compatible cyber asset attack surface management (CAASM) platform continuously scans, identifies, classifies and reports on sensitive data across the organization, simplifying compliance reporting, vulnerability management and risk remediation.
